Soviet aircraft industry was an essential part of the USSR's campaign for global dominance in the twentieth century. Thanks to the thick fog of secrecy that enveloped it throughout the Cold War, it has long inspired the fascination of analysts and enthusiasts in the West; until the collapse of the USSR in 1991, details of Soviet aircraft were often a matter of conjecture. This book aims to uncover fully the mystery surrounding this topic. Drawing on original and previously unpublished information obtained directly from the former USSR, Soviet Aircraft Industry examines the unique characteristics of Soviet-designed aircraft—particularly military types, which were the cause of great concern to the West. Further, by virtue of the industry's central role throughout Soviet history, this book provides a rare and important perspective into the broader theme of Russia's great communist experiment.

The North American Aircraft manufactures from their very beginning to their take-over by Rockwell and their eventual take over. The book gives details on the many aircraft produced. Performance - Dimensions - Weights - power plants - construction - first flights - totals and where many of them served. Around 250 pages of information which contains - 312 pictures - 96 plans
