Introduction to Database Keys. Keys are very important part of Relational database model. They are used to establish and identify relationships between tables and also to uniquely identify any record or row of data inside a table. A Key can be a single attribute or a group of attributes, where the combination may act as a key.

*Database Systems: Homework 2 Key -
cs.montana.edu*

A database system aims to achieve a highly organized collection of data along with appropriate tools and applications that facilitate processing and access to that data. Most people confuse a database system with a database management system, but the two are different. A DBMS is a suite of software tools used to store and manipulate data.
